

TENS: DRUG-FREE PAIN RELIEF

Drug overdose is now the leading cause of accidental death in the U.S., and opioid addiction is driving this epidemic. Opioid overdoses have increased more than 500% since 1999. Every day, an average of 115 Americans die from an opioid overdose. Opioid addiction affects people of all ages and from all walks of life.

Transcutaneous Electrical Nerve Stimulation (TENS) therapy has been used successfully since the 1960s by medical professionals such as physical therapists and chiropractors. It’s safe, drug-free, and now available over the counter.

ELECTRICAL STIMULATION THERAPY WORKS IN SEVERAL WAYS:

Gentle electrical pulses move through the skin to nearby nerves. These electrical signals block the pain message from reaching your brain, replacing the pain signals with electrical ones.

The pulses also trigger the release of endorphins, the body’s natural painkiller, into the bloodstream.

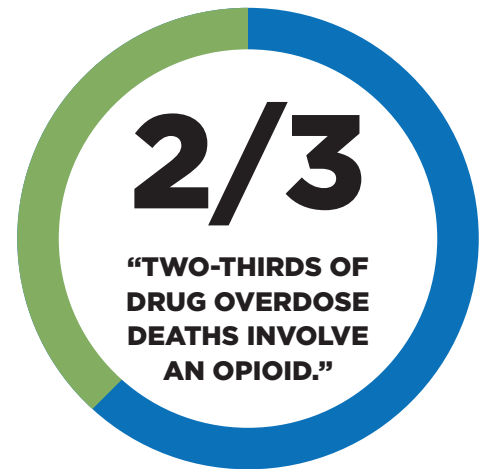

The pulses also improve blood circulation. Muscles contract and relax with the flow of the electrical stimulation, flooding your body with fresh oxygen and nutrients.

At Omron, we have strived to create safe, FDA-approved products that provide targeted pain relief without the use of drugs. TENS units can target multiple pain points on the body, from the shoulders to the legs, and all parts in between. TENS therapy also avoids the unfavorable side effects common with drug use. Omron TENS units are available over the counter, both online and through local and national retailers.
